

# Privacy Policy — *nexusStack*

**Effective date:** September 17, 2025

**Developer:** Ryan Bliss

**Contact:** ColdCodeBliss@gmail.com

## What this policy covers

This policy explains how the *nexusStack* iOS app handles information. It applies only to the current version of the app that stores data **locally on your device** and does **not** use any online sync or developer-run servers.

## Summary

- **We do not collect, track, sell, or share personal data.**
- The app saves your content **on your device only** (Jobs, Notes, Mind Maps, Checklists, Deliverables, and app settings).
- The app **does not** include analytics, advertising, or third-party SDKs.
- No data is transmitted to us or to third parties for storage or profiling.

## Data the app handles (on device)

- Your content is saved locally using Apple’s storage frameworks (SwiftData/UserDefaults).
- Optional **local notifications** (for reminders you set) are scheduled on device; no remote/push notifications are used.
- “Recent links” (e.g., GitHub/Confluence) and visual/style preferences are stored on device.

## Network activity & third-party content

- If you choose to open a link (e.g., GitHub or Confluence), the app makes a direct request to that site to display the page/file.
- We do **not** proxy, collect, or store the contents of those pages.
- Those third-party sites may collect their own technical data (e.g., IP address) under their respective privacy policies.

## Children’s privacy

*nexusStack* is not directed to children under 13. We do not collect personal data from anyone, including children.

## **Your choices**

- You can delete items inside the app at any time.
- Deleting the app removes all locally stored data. We do not hold any backup of your content.

## **Security**

Your data remains on your device and is protected by the security features of iOS and your device passcode/biometrics. Because we do not operate a server, we do not store your data outside your device.

## **Changes to this policy**

If we introduce features that transmit or sync data (e.g., iCloud/CloudKit) in a future update, we will update this policy and the App Store privacy details accordingly.
